medic T05 | PROFESSIONAL INFRARED THERMOMETER

BY **X**blitz[®]

Easy peasy

With Neno Medic T05 you can safely and easily measure the temperature of your child. Put the sensor at your child's forehead and press button. As a result, the measurement appears on the display devices.

Professional measurement

Neno Medic T05 is a medical device, so it can also be used e.g. in hospitals. The device is registered in the Office for Registration of Medicinal Products, Medical Devices and Biocidal Products.

Clear display

Large, easy-to-read digits on the display of contactless thermometer allows you easily to read the measured temperature. Additionally, the display shows information such as activated mode or unit of measurement.

Modern design

Using the Neno Medic T05 non-contact thermometer is extremely simple. Just press one button to switch on the device and measure the temperature. Thermometer handle is made in an ergonomic shape for easy grip and better using the device.

Memory for 34 measurements

The non-contact thermometer Neno Medic T05 stores up to 34 temperature measurements, letting you carefully follow the history of the disease and compare measurements among various days.

3 display colors

The Neno Medic T05 non-contact thermometer will immediately alert you when the measured temperature becomes too high. The display color of the device transforms from yellow (fever) into red (high fever).

Infrared Technology

Neno Medic T05 receives radiation infrared waves without contact and based on it, the body temperature or item is determined.

Measure mode object

Our thermometer features a measurement mode. You can easily estimate the temperature of the milk in a bottle or a delicious vegetable soup. This solution ensures safety and comfort for you and your baby.

Measure mode object

Neno Medic T05 is useful in many other situations. It will help you to get you know if the temperature of the bath water is suitable for your baby, or to get to know if a previously prepared hot water bag will not burn your baby's tummy.

PROFESSIONAL INFRARED THERMOMETER

Measure distance:	≤ 1 cm
Memory:	up to 34 measurements
Measure range:	34 ~ 43°C (body), 0 ~ 100°C (object)
Power:	2xAAA, DC 3V batteries (not included)
Accuracy of measurement:	± 0.2°C within 35 ~ 42°C, ± 0.3°C out of range
Working temperature:	15~40°C
Storage temperature:	-20~55°C
Dimensions:	150x75x50mm
Weight:	105g (without battery)
Backlight:	green when measuring ≤35°C yellow when measured to ≤37.6 ~ 38.0°C red when measured ≤38.1°C
