breastpump

DEAR MUM!

Every moment of relaxation or time spent with your child is worth its weight in gold. That is why it is a waste of time to do activities in which you could be replaced by a device created especially for this purpose. Neno's mission is that in this most beautiful, but also difficult time, every Mum can feel the genuine support of our products. That is why electric breast pumps, aspirators, nebulizers, electronic baby monitors, thermal cups, toothbrushes, and other Neno products help make everyday life easier and more pleasant for both Parents and babies alike.

TWO MODES

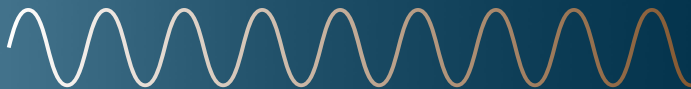

Neno Primo is a wireless, single, electronic breast pump designed for active mums and women who plan to return to work after childbirth and want to continue breastfeeding.

1 stimulation mode

In stimulation mode, the pumping device will make intensive and shallow movements. This mode is responsible for stimulating the mammary glands in your breasts to improve the flow of milk.

2 deep breast pumping mode

Long, deep pumping strokes to ensure efficient intake of milk.

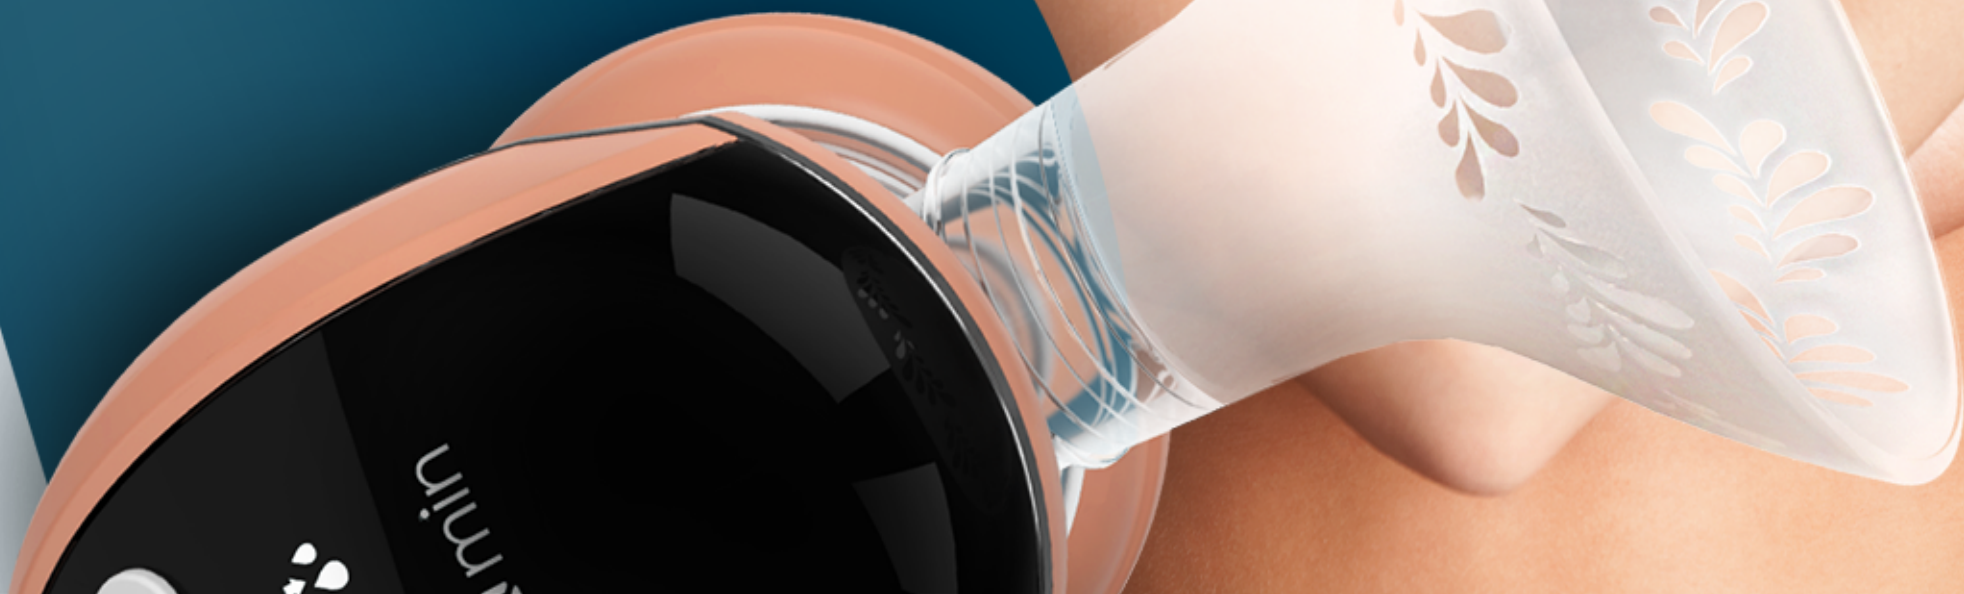

MOBILE

Due to its small size and weight, you can always carry the Neno Primo breast pump with you. It fits easily into a woman's handbag, so you can use it at any time!

GENTLE BREAST SHIELD

The Neno breast shields are made from high-quality, soft Japanese silicone for the ultimate comfort experience during breast pumping. In addition, the funnels are available in different sizes to help you fit the product to your nipple as much as possible.

LONG WORKING TIME

The *Neno Primo* allows for up to four full 30-minute pumping sessions on a single charge. The product is fully wireless, so you can pump wherever access to a power source is limited.

EASY TO STERILISE

Neno Primo can be sterilized using traditional methods with the use of boiling water or you can use professional products intended for disinfection (eg Neno Vita). It only takes 10 minutes to sterilize the breast pump components with our dedicated product!

MEDIA SEPARATION

The components used in Neno breast pumps (such as the membrane and valve) effectively prevent milk from getting into the motor of the machine. The membrane creates the physical barrier between the pump and the bottle, while the valve prevents milk from flowing backwards. In this way no milk gets into unwanted places, and you can easily keep your breast pump hygienic.

SMART BREAST PUMP

Neno Primo is extremely simple and intuitive to use. This model - just like the iconic *Neno Angelo* - uses traditional buttons. So you don't have to worry that just touching the display will change the chosen programme or the suction power of the device. *Neno Primo* has as many as 5 stimulation levels and 9 levels in the deep breast pumping mode. Additionally, the breast pump remembers the last settings and the next time it uses the same modes

air
suction

AIR SUCTION TECHNOLOGY

The *Neno* breast shield is characterized by the most advanced AIR SUCTION technology. It is a perfect imitation of the baby's natural sucking reflex and a guarantee of the nipple's comfort. AIR SUCTION also means more effective pumping and protection against the constriction of the milk ducts. Neno breast shield perfectly adapts to the sensitive skin of the female breast.

FULL SET

With the *Neno Primo* you get much more than just the pumping device itself. The set includes a milk bottle (150 ml), a teat with a cap, funnel with a protective cap, bottle cap and bottle stand, membrane, USB-C charging cable, additional valve, as well as two bags for storing and freezing breast milk with a breast pump adapter.

SPARE PARTS FOR NENO BREAST PUMPS

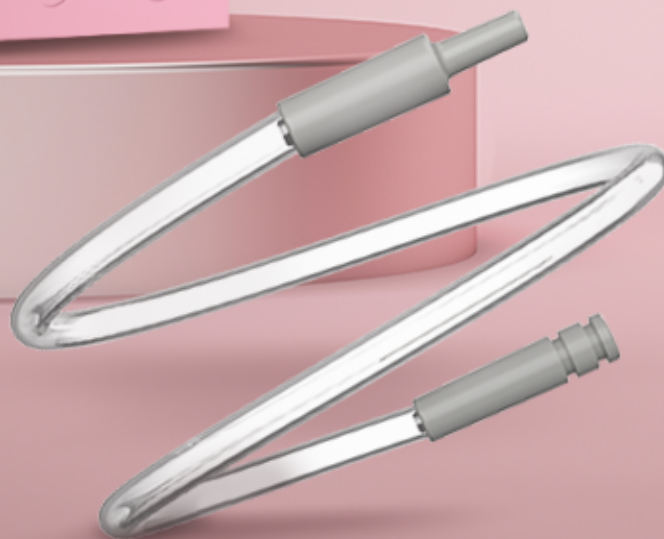

A breast pump is a device that is to serve us for many years - not only right after childbirth but also during our return to professional activity. The guarantee of proper working of the breast pump is regular replacing of spare parts: the membrane, the valve, and the breast shield. You will find all the necessary parts in the Neno Spare set, which is fully compatible with all models of Neno breast pumps.

buy separately
or as a set

• 2x membrane

• air tube

• 2x valve

• breast shield 24 mm
